

# Meeting Notes 17.12.2021

**Facilitator:** Huzaifa Huzaifa

**Objective:** Weekly team meeting

**Meeting Date:** 17.12.2021

**Start time:** 03:00 pm

**End time:** 05:00 pm

## Attendees

- Alexander Wiegel
- Huzaifa Huzaifa
- Shazeem Ashar

## Meeting Notes

### Agenda

- Discussion on the structure for the front end (Flutter).
- Discussion on how to create branches from the development branch.
- Discussion on how and when to merge the code and in which branch.
- Discussion on the flow of the app.
- Discussion on the backend apis. (Uploading image).
- Discussion on keeping a local database and password the same.
- Discussion on which feature to work on after must have features are completed.

## **Decisions**

- Every team member will work on his own branch checked out from the development branch.
- Commits shall be separated by topic.
- Before merging code it has to be reviewed by another member. If there are changes needed he will add a todo comment in the code and notify the other member.
- When the code has been reviewed and possible changes are done one can merge his branch with the development branch and try to run the code from the development branch to make sure everything is working as expected.
- Uploading images and data will be done using a single API call.
- We decided to keep the local database name and password the same, so that we just have to run the server locally without changing anything in the code (eg: database name, password).

## **Next Steps (can always be seen on Trello)**

- Shazeem will work on creating a frontend for login and register.
- Alex will work on creating a frontend for the overview and the creation of nests and nest items.
- Huzaifa will create a readme file with instructions on how to start a server locally.
- Huzaifa will also upload the db schema to the development branch.
- Huzaifa will start working on Chat APIs after completing the must-have feature APIs.
